

Oil & Gas Production Optimization

Contact Us →

Service Overview:

Introducing Oil & Gas Production Optimization in your company using AcuPrism and dashboarding.

Key Components:

- Selecting Databricks or MS Fabric version of AcuPrism based on customer setup and requirements. The selected version will be installed and configured in MS Azure (or in the case of Databricks, on AWS or GCP) within the customer's subscription.
- Selecting two data sources and loading all data into AcuPrism (pre-loaded or in real-time). This will determine which production optimization elements can be addressed.
- Addressing data governance requirements.
- Developing and implementing two MS Power BI dashboards using data from AcuPrism-connected sources, ensuring they reflect the agreed production optimization KPIs with AI integration where needed.
