Our RPA Migration Process

Achieve a seamless RPA migration with our six-step approach

1. **Assess & Plan**
   - Evaluate current RPA landscape, set migration goals, and select the target platform.

2. **Train & Manage Change**
   - Educate teams, develop change management plans, and communicate benefits to stakeholders.

3. **Execute Migration**
   - Prioritize, develop, test, and migrate processes to the new RPA platform.

4. **Validate & Optimize**
   - Compare performance metrics, refine migrated processes, and establish continuous improvement.

5. **Decommission & Support**
   - Retire old RPA platform, provide ongoing support, and assess migration success.

6. **Document & Map**
   - Record existing processes, create new workflows, and identify optimizations.

This approach ensures a smooth transition, maximizes benefits, and fosters long-term success on the new RPA platform.
